

THECNICAL FORM

SYNTAN GA

TANNIN SYNTHETIC LEATHERS

CHEMICAL COMPOSITION

Tannin synthetic phenolic based

PROPERTIES

Appearance :	beige powder
Concentration :	95 %
Ph :	7,5 – 8,5

PROPERTIES

SYNTAN GA is a synthetic tannin with a low astringent power. It's used during neutralization phase with NEUTRAL NE, giving to leathers a particular fine and firm grain. Using it in final after greasing gives a silky and dry grain with a very pleasant touch. In retanning for velour it gives good buffing and leventness and bringtness colour.

KIND OF USE

SYNTAN GA can be used combined with all kinds of synthetic tannins and retannins.
