

LAG POLV.

CHEMICAL COMPOSITION

Mixture of organic acid and inorganicsalts

CHARACTERISTICS

Apparance :	White powder
pH in solution at 10 % :	1,5 – 2
Index of acidity :	3,5-4 meq/litre
Storage stability :	12 months if perfectly stored

PROPERTIES

LAG POLV. Contains organic acids who allow the complete deliming of leathers and avoid also any blowing up problems, which are frequent by using acid products during the deliming process.

LAG POLV. Has the properties to complex and to solubilise the ions Ca^{++} Mg^{++} which are both precipitated or fixed between the leathers fibres.

The leathers have a clean and very stretched grain.

LAG POLV. Has strong deliming action and it can fast penetrate in the leather. These characteristics allow the product to delime leathers with a full thickness.
